Aquaintel PermitWorks

WATER USE PERMIT PREPARATION · SFWMD IRRIGATION

A draft your engineer can review.

For Florida engineering and hydrogeology firms. AquaIntel prepares the repeatable parts of the application from your project inputs.

01 / THE DRAFT

What the package can include

- **Narrative:** Project and technical sections based on the project record.
- **Calculations:** Irrigation demand tables and the assumptions for review.
- **Exhibits:** Maps and supporting documents agreed at intake.
- **Review:** QA findings and source references, with editable DOCX and PDF copies as agreed.

02 / THE WORKFLOW

From project inputs to review

1. **Supply inputs:** Share site, well and irrigation data, prior permits and supporting files.
2. **Prepare the draft:** AquaIntel organizes inputs, calculations and draft sections.
3. **Review:** Check assumptions, sources and any open QA findings.
4. **Finalize:** Your engineer completes the edits, certification and submission.

Scope and responsibility

The initial scope is irrigation in the South Florida Water Management District (SFWMD). Scope dewatering separately. Your professional of record owns final technical interpretation, edits, certification and submission. QA findings support review.

03 / A FIRST ENGAGEMENT

Evaluate it on a project you know.

Choose a completed SFWMD irrigation application. Compare the draft with your accepted approach. Record review time, corrections and work that remains manual.
